CC The present invention describes a polynucleotide (I), comprising CC parvovirus rep coding sequences and parvovirus cap coding sequences. The CC rep coding sequences encodes a DNA binding domain from a first CC parvovirus, and a capsid interacting domain from a parvovirus different from the first parvovirus. The cap coding sequence comprises sequences CC from the different parvovirus. Also described: (1) a vector comprising (I), or parvovirus rep coding sequences and CC parvovirus cap coding sequences, where the rep coding sequences and CC parvovirus different from the first parvovirus, the cap CC coding sequences comprise sequences from the first parvovirus, and CC coding sequences comprise sequences from the first parvovirus, and CC coding sequences are stably integrated into the genome of the CC call; and (3) producing a recombinant hybrid parvovirus particle or adeno CC cassociated virus (rAAV) particle. (I) can be used in vaccines, and in CC gene therapy. The polynucleotide (I) can be used in producing higher CC stocks of hybrid parvoviruses or parvovirus vectors, which may be used in the delivery of nucleic acids having biological effect to treat or ameliorate the symptoms associated with any disorder related to gene compress an immunogenic polypeptide in a subject, e.g. for vaccination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁

The method comprises delivering to the subject a recombinant adeno-associated virus (AAV) comprising a gene encoding a human apolipoprotein E (apoE) or apoA under the control of a regulatory control sequence which directs expression of the gene. The recombinant AAV also comprises a capsid protein selected from an AAV serotype (e.g. AAV7 or AAV8) which preferentially expresses high levels of transgene in live. A therapeutically effective amount of apoE or apoA expression is obtained upon delivery of low dose of AAV. The method of the invention is useful for lowering total cholesterol levels in a subject, e.g. for treating atherosclerosis, and for correcting defects in lipoprotein. The present sequence represents AAV serotype 7 (AAV7), which may be used to produce recombinant AAV vectors of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Lowering total cholesterol levels and treating atherosclerosis in a subject comprises delivering a recombinant adeno-associated virus (AAV) comprising an AAV serotype capsid protein or a gene encoding human apolipoprotein E (apoE) or apoA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID NO 7; 69pp; English.

REFERENCE AUTHORS TITLE ACCESSION VERSION KEYWORDS RESULT 1 CO892248/c LOCUS FEATURES COMMENT SOURCE DEFINITION JOURNAL ORGANISM source Email: hennig@molgen.mpg.de The library was characterised by oligonucleotide fingerprinting (ONF) to reduce sequencing redundancy. According to the ONFP procedure, clones that display the same hybridisation matrix with a battery of 200 Bmer oligonucleotides are grouped into clusters. One clone per ONFP cluster was selected for sequencing. cDNA clones and filters are distributed via Deutsches Resourcenzentrum fuer Genomforschung GmbH (http://www.rzpd.de). Dialibrary was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones that display the same hybridisation matrix with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
clone per ONFP cluster was selected for sequencing. cDNA clones and
filters are distributed via Deutsches Ressourcenzentrum fuer

                to initiate sequencing reactions.
Seq primer: left, 5'-GATAAGCTGTCAAACATGAGAATTC
Class: viral tagged.
                                                                Email: dgmiller@u.washington.edu
AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used

AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' prin was used to initiate sequencing reactions."

AAV Vector:Chromosome Junction Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' primer was undicates the 'left'.
                                                                                                                                                                                                      to initiate sequencing reactions.
Seq primer: left, 5'-GATAAGCTGTCAAACATGAGAATTC
Class: viral tagged.
                                                                                                                                                                                                                                                                                                                                                                                                                                           Department of Pediatrics

                                                                                                                                                                                                                                                                                                                                                                                                                        Email: dgmiller@u.washington.edu
AAV Vector:Chromosome Junction Sequences rescued as plasmids
bacteria, Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer wa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Department of Pediatrics

                                  Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                was used to initiate sequencing reactions."

AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Contact: Miller, D.G.

AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Department of Pediatrics

AAV Vector:Chromosome Junction Sequences rescued as plasmids i
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Department of Pediatrics

                                                                                                                                                      Conservative
                                                                                                                                                                                                                                               Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' prin was used to initiate sequencing reactions."

                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences rescued as plasmids in bacteria. Files with names differing only by x1 or y1 contain sequence reads from either end of the same AAV vector provirus. 'y1' indicates the 'left' and 'x1' indicates the 'right' primes used to initiate sequencing reactions."

AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used
to initiate sequencing reactions.
Seq primer: right, 5'-AFCACGAGGCCCTTTCGTCTTCAAG
Class: viral tagged.

AAV Vector:Chromosome Junction Sequences rescued as plasmids in
bacteria. Files with names differing only by x1 or y1 contain
sequence reads from either end of the same AAV provirus. 'y1'
indicates the 'left' and 'x1' indicates the 'right' primer was used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Department of Pediatrics
